ubuntu在重启之后输入nvidia-smi显示没有驱动

```
NVIDIA-SMI has failed because it couldn't communicate with the NVIDIA driver. Make sure that the latest NVIDIA driver is installed and running.
```

这时首先查看已经安装的驱动版本

```
ls /usr/src | grep nvidia
```

实验室的版本是510.60.02(0804更新后变为了510.85.02)

随后使用DKMS解决问题

```
1 | sudo apt install dkms
2 | sudo dkms install -m nvidia -v 510.60.02
```

一键注释 复制

查看安装效果

```
dkms status
```

如果nvidia-smi显示比较慢的话，可以通过如下命令来解决：

```
sudo nvidia-persistenced --persistence-mode
```
